描述: IL2 Nanobody

背景: Interleukin 2 (IL2) is a pro-inflammatory cytokine mainly produced by activated macrophages. Plays an important role in immune regulation and inflammatory processes. IL2 can induce T cells and natural killer (NK) cells to produce interferon-γ (IFN-γ), thereby enhancing cellular immune responses. In addition, IL2 can also induce Th1 cell differentiation and promote Th1 cell-mediated immune responses. IL2 nanobody can bind to IL2, thereby inhibiting its biological activity. In addition, it can also be used for the detection of IL2 and related research.
