UNIPROT ID: Q8TE59 (Gene Accession - NP_598377)

背景: This gene encodes a member of the ADAMTS (a disintegrin and metalloproteinase with thrombospondin motif) protein family. Members of the family share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-terminal domains. The protein encoded by this gene has high sequence similarity to the protein encoded by ADAMTS16, another family member.

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 213784(ADAMTS19 Antibody) at a dilution of 1/25(Secreted, ExtraCellular space, ExtraCellular matrix).

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the synthetic peptide and then with 213784(Anti-ADAMTS19 Antibody) at dilution 1/25.
