背景: AEBP2 is a zinc finger protein that has been shown to interact with the mammalian Polycomb Repression Complex 2 (PRC2). AEBP2 is an evolutionarily well-conserved gene that is found in the animals ranging from flying insects to mammals. The transcription of mammalian AEBP2 is driven by two alternative promoters and produces at least two isoforms of the protein. These isoforms show developmental stage-specific expression patterns: the adult-specific larger form (51 kDa) and the embryo-specific smaller form (32 kDa).

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 216952(AEBP2 Antibody) at a dilution of 1/25(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the fusion protein and then with 216952(Anti-AEBP2 Antibody) at dilution 1/25.

The image on the left is immunohistochemistry of paraffin-embedded Human lung cancer tissue using 216952(Anti-AEBP2 Antibody) at a dilution of 1/25.

In comparison with the IHC on the left, the same paraffin-embedded Human lung cancer tissue is first treated with fusion protein and then with D221528(Anti-AEBP2 Antibody) at dilution 1/25.
