UNIPROT ID: Q9Y3D8 (Gene Accession - BC007349)

背景: This gene encodes a protein that belongs to the adenylate kinase family of enzymes. The protein has a nuclear localization and contains Walker A (P-loop) and Walker B motifs and a metal-coordinating residue. The protein may be involved in regulation of Cajal body formation. In human, AK6 and TAF9 (GeneID: 6880) are two distinct genes that share 5' exons. Alternative splicing results in multiple transcript variants.

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 212922(AK6 Antibody) at a dilution of 1/90(Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the fusion protein and then with 212922(Anti-AK6 Antibody) at dilution 1/90.
