UNIPROT ID: Q92843 (Gene Accession - BC113522)

背景: This gene encodes a member of the BCL-2 protein family. The proteins of this family form hetero- or homodimers and act as anti- and pro-apoptotic regulators. Expression of this gene in cells has been shown to contribute to reduced cell apoptosis under cytotoxic conditions. Studies of the related gene in mice indicated a role in the survival of NGF- and BDNF-dependent neurons. Mutation and knockout studies of the mouse gene demonstrated an essential role in adult spermatogenesis. Alternative splicing results in multiple transcript variants. Read-through transcription also exists between this gene and the neighboring downstream PABPNI (poly(A) binding protein, nuclear 1) gene.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 210088(BCL2L2 Antibody) at a dilution of 1/15(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the fusion protein and then with 210088(Anti-BCL2L2 Antibody) at dilution 1/15.

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using 210088(Anti-BCL2L2 Antibody) at a dilution of 1/15.

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with fusion protein and then with D120152(Anti-BCL2L2 Antibody) at dilution 1/15.
