背景: This gene encodes a classical cadherin and member of the cadherin superfamily. Alternative splicing results in multiple transcript variants, at least one of which encodes a preproprotein is proteolytically processed to generate a calcium-dependent cell adhesion molecule and glycoprotein. This protein plays a role in the establishment of left-right asymmetry, development of the nervous system and the formation of cartilage and bone.

Immunohistochemistry analysis of paraffin embedded Human cervical cancer tissue using 219940(CDH2 Antibody) at a dilution of 1/25(Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human cervical cancer tissue is first treated with the synthetic peptide and then with 219940(Anti-CDH2 Antibody) at dilution 1/25.
