UNIPROT ID: Q9HD42 (Gene Accession - BC132711)

背景: This gene encodes a member of the CHMP/Chmp family of proteins which are involved in multivesicular body sorting of proteins to the interiors of lysosomes. The initial prediction of the protein sequence encoded by this gene suggested that the encoded protein was a metallopeptidase. The nomenclature has been updated recently to reflect the correct biological function of this encoded protein. Several transcripts encoding different isoforms have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 217284(CHMPIA Antibody) at a dilution of 1/60(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the fusion protein and then with 217284(Anti-CHMPIA Antibody) at dilution 1/60.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 217284(Anti-CHMPIA Antibody) at a dilution of 1/60.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with fusion protein and then with D222109(Anti-CHMPIA Antibody) at dilution 1/60.
