背景: This gene belongs to the chemokine-like factor gene superfamily. This family of genes encodes multi-pass membrane proteins that are similar to both the chemokine and the transmembrane 4 superfamilies of signaling molecules. Alternate transcriptional splice variants of this gene, encoding different isoforms, have been characterized. Highly expressed in the brain.

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 213548(CMTM5 Antibody) at a dilution of 1/40(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the synthetic peptide and then with 213548(Anti-CMTM5 Antibody) at dilution 1/40.
