UNIPROT ID: Q9P104 (Gene Accession - BC008992)

背景: The protein encoded by this gene is a member of the DOK family of membrane proteins, which are adapter proteins involved in signal transduction. The encoded protein interacts with phosphorylated receptor tyrosine kinases to mediate neurite outgrowth and activation of the MAP kinase pathway. In contrast to other DOK family proteins, this protein does not interact with RASGAP.

Immunohistochemistry analysis of paraffin embedded Human colon cancer tissue using 216477(DOK5 Antibody) at a dilution of 1/20(Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human colon cancer tissue is first treated with the fusion protein and then with 216477(Anti-DOK5 Antibody) at dilution 1/20.
