产品全名: DOK7 兔多抗

基因符号: CMS10; CMS1B; FADS3; C4orf25

UNIPROT ID: Q18PE1 (Gene Accession - NP_775931)

背景: The protein encoded by this gene is essential for neuromuscular synaptogenesis. The protein functions in a neural activation of muscle-specific receptor kinase, which is required for postsynaptic differentiation, and in the subsequent clustering of the acetylcholine receptor in myotubes. This protein can also induce autophosphorylation of muscle-specific receptor kinase. Mutations in this gene are a cause of familial limb-girdle myasthenia autosomal recessive, which is also known as congenital myasthenic syndrome type 1B. Alternative splicing results in multiple transcript variants.

Immunohistochemistry analysis of paraffin embedded Human cervical cancer tissue using 222408(DOK7 Antibody) at a dilution of 1/50(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human cervical cancer tissue is first treated with the synthetic peptide and then with 222408(Anti-DOK7 Antibody) at dilution 1/50.
