EFNA1 RABBIT PAB

: S216492

: EFNA1

B61, EFL1, ECKLG, EPLG1, LERK1, LERK-1, TNFAIP4

UNIPROT ID: P20827 (Gene Accession - BC032698)

: This gene encodes a member of the ephrin (EPH) family. The ephrins and EPH-related receptors comprise the largest subfamily of receptor protein-tyrosine kinases and have been implicated in mediating developmental events, especially in the nervous system and in erythropoiesis. Based on their structures and sequence relationships, ephrins are divided into the ephrin-A (EFNA) class, which are anchored to the membrane by a glycosylphosphatidylinositol linkage, and the ephrin-B (EFNB) class, which are transmembrane proteins. This gene encodes an EFNA class ephrin which binds to the EPHA2, EPHA4, EPHA5, EPHA6, and EPHA7 receptors. Two transcript variants that encode different isoforms were identified through sequence analysis.

: Fusion protein of human EFNA1

: ELISA, IHC

: IHC: 50-150; ELISA: 1000-5000

: Rabbit

Rabbit Polyclonal

: Immunogen-specific rabbit IgG
: Antigen affinity purification

: Human, Mouse, Rat
: PBS (without Mg2+ and Ca2+), pH 7.4, 150 mM NaCl, 0.05% Sodium Azide and 40% glycerol

: Signal Transduction, Neuroscience, Cardiovascular

: Store at -20ºC. Avoid repeated freezing and thawing

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 216492(EFNA1 Antibody) at a dilution of 1/51(Cytoplasm).

In comparision with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the fusion protein and then with 216492(Anti-EFNA1 Antibody) at dilution 1/51.
