

ETF B RABBIT PAB

货号: S220533

产品全名: ETF B 兔多抗

基因符号: MADD; FP585

UNIPROT ID: P38117 (Gene Accession - NP_001976)

背景: This gene encodes electron-transfer-flavoprotein, beta polypeptide, which shuttles electrons between primary flavoprotein dehydrogenases involved in mitochondrial fatty acid and amino acid catabolism and the membrane-bound electron transfer flavoprotein ubiquinone oxidoreductase. The gene deficiencies have been implicated in type II glutaricaciduria. Alternatively spliced transcript variants have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 220533(ETFB Antibody) at a dilution of 1/25(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the synthetic peptide and then with 220533(Anti-ETFB Antibody) at dilution 1/25.

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using 220533(Anti-ETFB Antibody) at a dilution of 1/25.

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with synthetic peptide and then with D261662(Anti-ETFB Antibody) at dilution 1/25.
