UNIPROT ID: Q14435 (Gene Accession - BC113565)

背景: This gene encodes UDP-GalNAc transferase 3, a member of the GalNAc-transferases family. This family transfers an N-acetyl galactosamine to the hydroxyl group of a serine or threonine residue in the first step of O-linked oligosaccharide biosynthesis. Individual GalNAc-transferases have distinct activities and initiation of O-glycosylation is regulated by a repertoire of GalNAc-transferases. The protein encoded by this gene is highly homologous to other family members, however the enzymes have different substrate specificities. [provided by RefSeq, Jul 2008]

Immunohistochemistry analysis of paraffin embedded Human colorectal cancer tissue using 219459(GALNT3 Antibody) at a dilution of 1/85(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human colorectal cancer tissue is first treated with the fusion protein and then with 219459(Anti-GALNT3 Antibody) at dilution 1/85.
