背景: Cell surface heparan sulfate proteoglycans are composed of a membrane-associated protein core substituted with a variable number of heparan sulfate chains. Members of the glypican-related integral membrane proteoglycan family (GRIPS) contain a core protein anchored to the cytoplasmic membrane via a glycosyl phosphatidylinositol linkage. These proteins may play a role in the control of cell division and growth regulation.

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 215108 (GPC5 Antibody) at a dilution of 1/40 (Cytoplasm and Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the synthetic peptide and then with 215108 (Anti-GPC5 Antibody) at dilution 1/40.
