**背景:** GRTP1 (Growth hormone-regulated TBC protein 1), also designated TBC1 domain family member 6, is a 336 amino acid protein with expression modulated by growth hormone. The TBC1 domain of GRTP1 is a region that is notably conserved among GTPase-activating proteins, which characteristically play a role in the cell cycle and mitosis coordination. Interestingly, expression of GRTP1 is significantly upregulated in post-puberty testis and then maintained in the adult, suggesting that the germ cell may be the major site of GRTP1 function. There are two isoforms of GRTP1, which are a result of alternative splicing events. May act as a GTPase-activating protein for Rab family protein(s).

Immunohistochemistry analysis of paraffin embedded Human esophagus cancer using 215925 (GRTP1 Antibody) at a dilution of 1/40 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human esophagus cancer is first treated with the synthetic peptide and then with 215925 (Anti-GRTP1 Antibody) at dilution 1/40.

The image on the left is immunohistochemistry of paraffin-embedded Human colorectal cancer using 215925 (Anti-GRTP1 Antibody) at a dilution of 1/40.

In comparison with the IHC on the left, the same paraffin-embedded Human colorectal cancer is first treated with synthetic peptide and then with D164134 (Anti-GRTP1 Antibody) at dilution 1/40.
