**UNIPROT ID:** Q9P0R6 (Gene Accession - BC004818 )

**背景:** This gene encodes a protein that is involved as a negative regulator of GSK3-beta in the Wnt signaling pathway. The encoded protein may play a role in the retinoic acid signaling pathway by regulating the functional interactions between GSK3-beta, beta-catenin and cyclin D1, and it regulates the beta-catenin/N-cadherin pool. The encoded protein contains a GSK3-beta interacting domain (GID) in its C-terminus, which is similar to the GID of Axin. The protein also contains an evolutionarily conserved RII-binding domain, which facilitates binding with protein kinase-A and GSK3-beta, enabling its role as an A-kinase anchoring protein. Alternatively spliced transcript variants have been observed for this gene.

Immunohistochemistry analysis of paraffin embedded Human tonsil tissue using 218961(GSKIP Antibody) at a dilution of 1/55(Cytoplasm or Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with the fusion protein and then with 218961(Anti-GSKIP Antibody) at dilution 1/55.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 218961(Anti-GSKIP Antibody) at a dilution of 1/55.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with fusion protein and then with D225572(Anti-GSKIP Antibody) at dilution 1/55.
