

## HOOK1 RABBIT PAB

货号: S219409

产品全名: HOOK1 兔多抗

基因符号: HK1

**UNIPROT ID:** Q9UJC3 (Gene Accession - BC011621)

**背景:** This gene encodes a member of the hook family of coiled-coil proteins, which bind to microtubules and organelles through their N- and C-terminal domains, respectively. The encoded protein localizes to discrete punctuate subcellular structures, and interacts with several members of the Rab GTPase family involved in endocytosis. It is thought to link endocytic membrane trafficking to the microtubule cytoskeleton. Several alternatively spliced transcript variants have been identified, but the full-length nature of some of these variants has not been determined.
