背景: This gene encodes a member of the short-chain nonmetalloenzyme alcohol dehydrogenase protein family. The encoded enzyme is responsible for the metabolism of prostaglandins, which function in a variety of physiologic and cellular processes such as inflammation. Mutations in this gene result in primary autosomal recessive hypertrophic osteoarthropathy and cranioosteoarthropathy. Multiple transcript variants encoding different isoforms have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human colon cancer tissue using 217511(HPGD Antibody) at a dilution of 1/30(Cytoplasm and Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human colon cancer tissue is first treated with the fusion protein and then with 217511(Anti-HPGD Antibody) at dilution 1/30.

The image on the left is immunohistochemistry of paraffin-embedded Human gastric cancer tissue using 217511(Anti-HPGD Antibody) at a dilution of 1/30.

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with fusion protein and then with D222495(Anti-HPGD Antibody) at dilution 1/30.
