背景: The protein encoded by this gene is a member of the intercellular adhesion molecule (ICAM) family. All ICAM proteins are type I transmembrane glycoproteins, contain 2-9 immunoglobulin-like C2-type domains, and bind to the leukocyte adhesion LFA-1 protein. This protein is expressed on the surface of telencephalic neurons and displays two types of adhesion activity, homophilic binding between neurons and heterophilic binding between neurons and leukocytes. It may be a critical component in neuron-microglial cell interactions in the course of normal development or as part of neurodegenerative diseases.

Immunohistochemistry analysis of paraffin embedded Human colon cancer tissue using 220616(ICAM5 Antibody) at a dilution of 1/20(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human colon cancer tissue is first treated with the synthetic peptide and then with 220616(Anti-ICAM5 Antibody) at dilution 1/20.

The image on the left is immunohistochemistry of paraffin-embedded Human brain tissue using 220616(Anti-ICAM5 Antibody) at a dilution of 1/20.

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with synthetic peptide and then with D261769(Anti-ICAM5 Antibody) at dilution 1/20.
