背景: This gene encodes the third of three enzymes that posttranslationally modify isoprenylated C-terminal cysteine residues in certain proteins and target those proteins to the cell membrane. This enzyme localizes to the endoplasmic reticulum. Alternative splicing may result in other transcript variants, but the biological validity of those transcripts has not been determined.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 221752 (ICMT Antibody) at a dilution of 1/45 (Cytoplasm and Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 221752 (Anti-ICMT Antibody) at dilution 1/45.
