产品全名: IFI16 兔多抗

UNIPROT ID: Q16666 (Gene Accession - NP_005522)

背景: This gene encodes a member of the HIN-200 (hematopoietic interferon-inducible nuclear antigens with 200 amino acid repeats) family of cytokines. The encoded protein contains domains involved in DNA binding, transcriptional regulation, and protein-protein interactions. The protein localizes to the nucleoplasm and nucleoli, and interacts with p53 and retinoblastoma-1. It modulates p53 function, and inhibits cell growth in the Ras/Raf signaling pathway. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.

Immunohistochemistry analysis of paraffin embedded Human lung cancer tissue using 221376(IFI16 Antibody) at a dilution of 1/20(Cytoplasm or Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human lung cancer tissue is first treated with the synthetic peptide and then with 221376(Anti-IFI16 Antibody) at dilution 1/20.

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using 221376(Anti-IFI16 Antibody) at a dilution of 1/20.

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with synthetic peptide and then with D262938(Anti-IFI16 Antibody) at dilution 1/20.
