产品全名: KCNIP3 兔多抗

UNIPROT ID: Q9Y2W7 (Gene Accession - BC012850)

背景: This gene encodes a member of the family of voltage-gated potassium (Kv) channel-interacting proteins, which belong to the recoverin branch of the EF-hand superfamily. Members of this family are small calcium binding proteins containing EF-hand-like domains. They are integral subunit components of native Kv4 channel complexes that may regulate A-type currents, and hence neuronal excitability, in response to changes in intracellular calcium. The encoded protein also functions as a calcium-regulated transcriptional repressor, and interacts with presenilins. Alternatively spliced transcript variants encoding different isoforms have been described.

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 219295(KCNIP3 Antibody) at a dilution of 1/90(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the fusion protein and then with 219295(Anti-KCNIP3 Antibody) at dilution 1/90.
