## **KLK2 RABBIT PAB**

货号: S219876 产品全名: KLK2 兔多抗 基因符号 hK2, hGK-1, KLK2A2

UNIPROT ID: P20151 (Gene Accession - NP\_005542)

背景: This gene encodes a member of the grandular kallikrein protein family. Kallikreins are a subgroup of serine proteases that are clustered on chromosome 19. Members of this family are involved in a diverse array of biological functions. The protein encoded by this gene is a highly active trypsin-like serine protease that selectively cleaves at arginine residues. This protein is primarily expressed in prostatic tissue and is responsible for cleaving pro-prostate-specific antigen into its enzymatically active form. This gene is highly expressed in prostate tumor cells and may be a prognostic maker for prostate cancer risk. Alternate splicing results in both coding and non-coding transcript variants.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 219876(KLK2 Antibody) at a dilution of 1/100(Cytoplasm).

In comparision with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 219876(Anti-KLK2 Antibody) at dilution 1/100.

The image on the left is immunohistochemistry of paraffinembedded Human ovarian cancer tissue using 219876(Anti-KLK2 Antibody) at a dilution of 1/100.

In comparision with the IHC on the left, the same paraffin-embedded Human ovarian cancer tissue is first treated with synthetic peptide and then with D260535(Anti-KLK2 Antibody) at dilution 1/100.
