背景: The protein encoded by this gene is a member of the keratin family. The keratins are intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic proteins which are arranged in pairs of heterotypic keratin chains. The type I cytokeratin genes are clustered in a region of chromosome 17q12-q21. Alternative splicing results in multiple transcript variants.

Immunohistochemistry analysis of paraffin embedded Human gastric cancer tissue using 210141(KRT23 Antibody) at a dilution of 1/85(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with the fusion protein and then with 210141(Anti-KRT23 Antibody) at dilution 1/85.

The image on the left is immunohistochemistry of paraffin-embedded Human tonsil tissue using 210141(Anti-KRT23 Antibody) at a dilution of 1/85.

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with fusion protein and then with D120242(Anti-KRT23 Antibody) at dilution 1/85.
