背景: The galectins are a family of beta-galactoside-binding proteins implicated in modulating cell-cell and cell-matrix interactions. LGALS3BP has been found elevated in the serum of patients with cancer and in those infected by the human immunodeficiency virus (HIV). It appears to be implicated in immune response associated with natural killer (NK) and lymphokine-activated killer (LAK) cell cytotoxicity. Using fluorescence in situ hybridization the full length 90K cDNA has been localized to chromosome 17q25.

Immunohistochemistry analysis of paraffin embedded Human breast cancer tissue using 217575 (LGALS3BP Antibody) at a dilution of 1/25 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with the fusion protein and then with 217575 (Anti-LGALS3BP Antibody) at dilution 1/25.

The image on the left is immunohistochemistry of paraffin-embedded Human colon cancer tissue using 217575 (Anti-LGALS3BP Antibody) at a dilution of 1/25.

In comparison with the IHC on the left, the same paraffin-embedded Human colon cancer tissue is first treated with fusion protein and then with D222617 (Anti-LGALS3BP Antibody) at dilution 1/25.
