背景: This gene is a member of the melanoma antigen gene (MAGE) family. The proteins of this family are tumor-specific antigens that can be recognized by autologous cytolytic T lymphocytes. This protein contains a large number of unique short repetitive sequences in front of the MAGE-homologous sequence, and therefore is about 800 aa longer than the other MAGE proteins.

Immunohistochemistry analysis of paraffin embedded Human ovarian cancer tissue using 214465(MAGEC1 Antibody) at a dilution of 1/30(Cytoplasm and Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human ovarian cancer tissue is first treated with the synthetic peptide and then with 214465(Anti-MAGEC1 Antibody) at dilution 1/30.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 214465(Anti-MAGEC1 Antibody) at a dilution of 1/30.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with synthetic peptide and then with D161879(Anti-MAGEC1 Antibody) at dilution 1/30.
