UNIPROT ID: Q12866 (Gene Accession - BC114918)

背景: This gene is a member of the MER/AXL/TYRO3 receptor kinase family and encodes a transmembrane protein with two fibronectin type-III domains, two Ig-like C2-type (immunoglobulin-like) domains, and one tyrosine kinase domain. Mutations in this gene have been associated with disruption of the retinal pigment epithelium (RPE) phagocytosis pathway and onset of autosomal recessive retinitis pigmentosa (RP).

Immunohistochemistry analysis of paraffin embedded Human cervical cancer tissue using 216433(MERTK Antibody) at a dilution of 1/50(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human cervical cancer tissue is first treated with the fusion protein and then with 216433(Anti-MERTK Antibody) at dilution 1/50.

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using 216433(Anti-MERTK Antibody) at a dilution of 1/50.

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with fusion protein and then with D220440(Anti-MERTK Antibody) at dilution 1/50.
