背景: This gene encodes an N(6)-adenine-specific DNA methyltransferase. The encoded enzyme may be involved in the methylation of release factor I during translation termination. This enzyme is also involved in converting the arsenic metabolite monomethylarsonous acid to the less toxic dimethylarsonic acid. Alternative splicing of this gene results in multiple transcript variants. A related pseudogene has been identified on chromosome 11.

Immunohistochemistry analysis of paraffin embedded Human tonsil tissue using 218822(N6AMT1 Antibody) at a dilution of 1/120(Cytoplasm and Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with the fusion protein and then with 218822(Anti-N6AMT1 Antibody) at dilution 1/120.
