UNIPROT ID: Q9ULP0 (Gene Accession - NP_001123959)

背景: This gene is a member of the N-myc downregulated gene family which belongs to the alpha/beta hydrolase superfamily. The protein encoded by this gene is a cytoplasmic protein that is required for cell cycle progression and survival in primary astrocytes and may be involved in the regulation of mitogenic signalling in vascular smooth muscles cells. Alternative splicing results in multiple transcripts encoding different isoforms.

Immunohistochemistry analysis of paraffin embedded Human colon cancer tissue using 220136(NDRG4 Antibody) at a dilution of 1/45(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human colon cancer tissue is first treated with the synthetic peptide and then with 220136(Anti-NDRG4 Antibody) at dilution 1/45.
