背景: This gene encodes a protein that contains four domains present in other developmental proteins: a PWWP domain, an HMG bo,x a SET domain, and a PHD-type zinc finger. It is expressed ubiquitously in early development. Wolf-Hirschhorn syndrome (WHS) is a malformation syndrome associated with a hemizygous deletion of the distal short arm of chromosome 4. This gene maps to the 165 kb WHS critical region and has also been involved in the chromosomal translocation t(4;14)(p16.3;q32.3) in multiple myelomas. Alternative splicing of this gene results in multiple transcript variants encoding different isoforms. Some transcript variants are nonsense-mediated mRNA (NMD) decay candidates, hence not represented as reference sequences. [provided by RefSeq, Jul 2008]

Immunohistochemistry analysis of paraffin embedded Human colorectal cancer tissue using 221550(NSD2 Antibody) at a dilution of 1/40(Nucleus).

In comparision with the IHC on the left, the same paraffin-embedded Human colorectal cancer tissue is first treated with the synthetic peptide and then with 221550(Anti-NSD2 Antibody) at dilution 1/40.
