背景: The protein encoded by this gene is a member of the neurotrophin family, that controls survival and differentiation of mammalian neurons. This protein is closely related to both nerve growth factor and brain-derived neurotrophic factor. It may be involved in the maintenance of the adult nervous system, and may affect development of neurons in the embryo when it is expressed in human placenta. NTF3-deficient mice generated by gene targeting display severe movement defects of the limbs. The mature peptide of this protein is identical in all mammals examined including human, pig, rat and mouse.

Immunohistochemistry analysis of paraffin embedded Human cervical cancer tissue using 222392(NTF3 Antibody) at a dilution of 1/50(Secreted).

In comparison with the IHC on the left, the same paraffin-embedded Human cervical cancer tissue is first treated with the synthetic peptide and then with 222392(Anti-NTF3 Antibody) at dilution 1/50.

The image on the left is immunohistochemistry of paraffin-embedded Human colorectal cancer tissue using 222392(Anti-NTF3 Antibody) at a dilution of 1/50.

In comparison with the IHC on the left, the same paraffin-embedded Human colorectal cancer tissue is first treated with synthetic peptide and then with D264535(Anti-NTF3 Antibody) at dilution 1/50.
