

PDGFA RABBIT PAB

货号: S220170

产品全名: PDGFA 兔多抗

基因符号 PDGF1; PDGF-A

UNIPROT ID: P04085 (Gene Accession - NP_002598)

背景: This gene encodes a member of the protein family comprised of both platelet-derived growth factors (PDGF) and vascular endothelial growth factors (VEGF). The encoded preproprotein is proteolytically processed to generate platelet-derived growth factor subunit A, which can homodimerize, or alternatively, heterodimerize with the related platelet-derived growth factor subunit B. These proteins bind and activate PDGF receptor tyrosine kinases, which play a role in a wide range of developmental processes. Alternative splicing results in multiple transcript variants. Immunohistochemistry analysis of paraffin embedded Human esophagus cancer tissue using 220170(PDGFA Antibody) at a dilution of 1/50(Cytoplasm and Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human esophagus cancer tissue is first treated with the synthetic peptide and then with 220170(Anti-PDGFA Antibody) at dilution 1/50.
