产品全名: PILRB 兔多抗

基因符号: FDFACT1; FDFACT2

UNIPROT ID: Q9UKJ0 (Gene Accession - BC050547)

背景: The paired immunoglobulin-like type 2 receptors consist of highly related activating and inhibitory receptors that are involved in the regulation of many aspects of the immune system. The paired immunoglobulin-like receptor genes are located in a tandem head-to-tail orientation on chromosome 7. This gene encodes the activating member of the receptor pair and contains a truncated cytoplasmic tail relative to its inhibitory counterpart (PILRA), that has a long cytoplasmic tail with immunoreceptor tyrosine-based inhibitory (ITIM) motifs.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 217693(PILRB Antibody) at a dilution of 1/20(Cytoplasm or Cell membrane).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the fusion protein and then with 217693(Anti-PILRB Antibody) at dilution 1/20.
