

## PIM1 RABBIT MAB

货号: N263122

产品全名: PIM1 兔单克隆抗体

基因符号 PIM1; Serine/threonine-protein kinase pim-1

**UNIPROT ID:** P11309

**背景:** Pim1 a proto-oncogene serine/threonine kinase involved in cell survival and cell proliferation and thus providing a selective advantage in tumorigenesis. Exerts its oncogenic activity through: the regulation of MYC transcriptional activity, the regulation of cell cycle progression and by phosphorylation and inhibition of proapoptotic proteins (BAD, MAP3K5, FOXO3). Phosphorylation of MYC leads to an increase of MYC protein stability and thereby an increase of transcriptional activity. The stabilization of MYC exercised by PIM1 might explain partly the strong synergism between these two oncogenes in tumorigenesis.
