

PPP1R13B RABBIT PAB

货号: S213386

产品全名: PPP1R13B 兔多抗

基因符号 p85; PPP1R13B; p53BP2-like

UNIPROT ID: Q96KQ4 (Gene Accession - NP_056131)

背景: This gene encodes a member of the ASPP (apoptosis-stimulating protein of p53) family of p53 interacting proteins. The protein contains four ankyrin repeats and an SH3 domain involved in protein-protein interactions. ASPP proteins are required for the induction of apoptosis by p53-family proteins. They promote DNA binding and transactivation of p53-family proteins on the promoters of proapoptotic genes. Expression of this gene is regulated by the E2F transcription factor.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 213386(PPP1R13B Antibody) at a dilution of 1/35(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 213386(Anti-PPP1R13B Antibody) at dilution 1/35.
