

PRKCE RABBIT PAB

货号: S217102

产品全名: PRKCE 兔多抗

基因符号 PKCE; nPKC-epsilon

UNIPROT ID: Q02156 (Gene Accession - BC109033)

背景: Protein kinase C (PKC) is a family of serine- and threonine-specific protein kinases that can be activated by calcium and the second messenger diacylglycerol. PKC family members phosphorylate a wide variety of protein targets and are known to be involved in diverse cellular signaling pathways. PKC family members also serve as major receptors for phorbol esters, a class of tumor promoters. Each member of the PKC family has a specific expression profile and is believed to play a distinct role in cells. The protein encoded by this gene is one of the PKC family members.

抗原: Fusion protein of human PRKCE

经过测试的应用: ELISA, IHC

推荐稀释比: IHC: 50-200; ELISA: 1000-5000

种属反应性: Rabbit

克隆性: Rabbit Polyclonal

亚型: Immunogen-specific rabbit IgG

纯化: Antigen affinity purification

种属反应性: Human, Mouse, Rat

成分: PBS (without Mg²⁺ and Ca²⁺), pH 7.4, 150 mM NaCl, 0.05% Sodium Azide and 40% glycerol

研究领域: Signal Transduction, Cardiovascular

储存和运输: Store at -20°C. Avoid repeated freezing and thawing

Immunohistochemistry analysis of paraffin embedded Human thyroid cancer tissue using 217102 (PRKCE Antibody) at a dilution of 1/30 (Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with the fusion protein and then with 217102 (Anti-PRKCE Antibody) at dilution 1/30.

The image on the left is immunohistochemistry of paraffin-embedded Human liver cancer tissue using 217102 (Anti-PRKCE Antibody) at a dilution of 1/30.

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with fusion protein and then with D221794 (Anti-PRKCE Antibody) at dilution 1/30.

Product Description

Pioneering GTPase and Oncogene Product Development since 2010
