背景: This gene encodes a member of the neuropeptide Y (NPY) family of peptides. The encoded preproprotein is proteolytically processed to generate two alternative peptide products that differ in length by three amino acids. These peptides, secreted by endocrine cells in the gut, exhibit different binding affinities for each of the neuropeptide Y receptors. Binding of the encoded peptides to these receptors mediates regulation of pancreatic secretion, gut mobility and energy homeostasis. Rare variations in this gene could increase susceptibility to obesity and elevated serum levels of the encoded peptides may be associated with anorexia nervosa.

Immunohistochemistry analysis of paraffin embedded Human esophagus cancer tissue using 220889(PYY Antibody) at a dilution of 1/50 (Secreted).

In comparison with the IHC on the left, the same paraffin-embedded Human esophagus cancer tissue is first treated with the synthetic peptide and then with 220889 (Anti-PYY Antibody) at dilution 1/50.

The image on the left is immunohistochemistry of paraffin-embedded Human gastric cancer tissue using 220889 (Anti-PYY Antibody) at a dilution of 1/50.

In comparison with the IHC on the left, the same paraffin-embedded Human gastric cancer tissue is first treated with synthetic peptide and then with D262177 (Anti-PYY Antibody) at dilution 1/50.
