背景: This gene encodes a member of the RNA-binding FOX protein family which is involved in the regulation of alternative splicing of pre-mRNA. The protein has an N-terminal proline-rich region, an RNA recognition motif (RRM) domain, and a C-terminal alanine-rich region. This gene produces the neuronal nuclei (NeuN) antigen that has been widely used as a marker for post-mitotic neurons. This gene has its highest expression in the central nervous system and plays a prominent role in neural tissue development and regulation of adult brain function. Mutations in this gene have been associated with numerous neurological disorders. Alternative splicing of this gene results in multiple transcript variants encoding distinct isoforms.

Immunohistochemistry analysis of paraffin embedded Human tonsil tissue using 219947(RBFOX3 Antibody) at a dilution of 1/50(Nucleus and Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human tonsil tissue is first treated with the synthetic peptide and then with 219947(Anti-RBFOX3 Antibody) at dilution 1/50.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 219947(Anti-RBFOX3 Antibody) at a dilution of 1/50.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with synthetic peptide and then with D260666(Anti-RBFOX3 Antibody) at dilution 1/50.
