产品全名: RNF14 兔多抗

基因符号: ARA54; HFB30; TRIAD2; HRIHFB2038

UNIPROT ID: Q9UBS8 (Gene Accession - BC126185)

背景: The protein encoded by this gene contains a RING zinc finger, a motif known to be involved in protein-protein interactions. This protein interacts with androgen receptor (AR) and may function as a coactivator that induces AR target gene expression in prostate. A dominant negative mutant of this gene has been demonstrated to inhibit the AR-mediated growth of prostate cancer. This protein also interacts with class III ubiquitin-conjugating enzymes (E2s) and may act as a ubiquitin-ligase (E3) in the ubiquitination of certain nuclear proteins.
