UNIPROT ID: Q12770 (Gene Accession - BC020987)

背景: This gene encodes a protein with a sterol sensing domain (SSD) and seven WD domains. In the presence of cholesterol, this protein binds to sterol regulatory element binding proteins (SREBPs) and mediates their transport from the ER to the Golgi. The SREBPs are then proteolytically cleaved and regulate sterol biosynthesis. Alternative splicing results in multiple transcript variants.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 217794(SCAP Antibody) at a dilution of 1/80(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the fusion protein and then with 217794(Anti-SCAP Antibody) at dilution 1/80.

The image on the left is immunohistochemistry of paraffin-embedded Human breast cancer tissue using 217794(Anti-SCAP Antibody) at a dilution of 1/80.

In comparison with the IHC on the left, the same paraffin-embedded Human breast cancer tissue is first treated with fusion protein and then with D223094(Anti-SCAP Antibody) at dilution 1/80.
