UNIPROT ID: Q9BT88 (Gene Accession - BC004291)

背景: This gene is a member of the synaptotagmin gene family and encodes a protein similar to other family members that are known calcium sensors and mediate calcium-dependent regulation of membrane trafficking in synaptic transmission. The encoded protein is also a substrate for ubiquitin-E3-ligase parkin. The gene has previously been referred to as synaptotagmin XII but has been renamed synaptotagmin XI to be consistent with mouse and rat official nomenclature.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 216811(SYT11 Antibody) at a dilution of 1/30(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the fusion protein and then with 216811(Anti-SYT11 Antibody) at dilution 1/30.
