

TNPO1 RABBIT PAB

货号: S220715

产品全名: TNPO1 兔多抗

基因符号: MIP; TRN; IPO2; MIP1; KPNB2

UNIPROT ID: Q92973 (Gene Accession - NP_002261)

背景: This gene encodes the beta subunit of the karyopherin receptor complex which interacts with nuclear localization signals to target nuclear proteins to the nucleus. The karyopherin receptor complex is a heterodimer of an alpha subunit which recognizes the nuclear localization signal and a beta subunit which docks the complex at nucleoporins. Alternate splicing of this gene results in two transcript variants encoding different proteins.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 220715(TNPO1 Antibody) at a dilution of 1/20(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the synthetic peptide and then with 220715(Anti-TNPO1 Antibody) at dilution 1/20.
