

TYK2 RABBIT PAB

货号: S217965

产品全名: TYK2 兔多抗

基因符号 JTK1; IMD35

UNIPROT ID: P29597 (Gene Accession - BC014243)

背景: This gene encodes a member of the tyrosine kinase and, more specifically, the Janus kinases (JAKs) protein families. This protein associates with the cytoplasmic domain of type I and type II cytokine receptors and promulgate cytokine signals by phosphorylating receptor subunits. It is also component of both the type I and type III interferon signaling pathways. As such, it may play a role in anti-viral immunity. A mutation in this gene has been associated with hyperimmunoglobulin E syndrome (HIES) - a primary immunodeficiency characterized by elevated serum immunoglobulin E.

Immunohistochemistry analysis of paraffin embedded Human liver cancer tissue using 217965(TYK2 Antibody) at a dilution of 1/130(Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human liver cancer tissue is first treated with the fusion protein and then with 217965(Anti-TYK2 Antibody) at dilution 1/130.

The image on the left is immunohistochemistry of paraffin-embedded Human thyroid cancer tissue using 217965(Anti-TYK2 Antibody) at a dilution of 1/130.

In comparison with the IHC on the left, the same paraffin-embedded Human thyroid cancer tissue is first treated with fusion protein and then with D223461(Anti-TYK2 Antibody) at dilution 1/130.
