背景: USP35 (ubiquitin specific peptidase 35) is a 1,017 amino acid protein that belongs to the peptidase C19 family. Expressed in pancreas, testis and skeletal muscle, USP35 functions to catalyze the conversion of a ubiquitin C-terminal thioester and water to free ubiquitin and a thiol, a reaction that may play a role in signaling events throughout the cell.

Immunohistochemistry analysis of paraffin embedded Human brain tissue using 218332(USP35 Antibody) at a dilution of 1/30(Nucleus and Cytoplasm).

In comparison with the IHC on the left, the same paraffin-embedded Human brain tissue is first treated with the fusion protein and then with 218332(Anti-USP35 Antibody) at dilution 1/30.

The image on the left is immunohistochemistry of paraffin-embedded Human prostate cancer tissue using 218332(Anti-USP35 Antibody) at a dilution of 1/30.

In comparison with the IHC on the left, the same paraffin-embedded Human prostate cancer tissue is first treated with fusion protein and then with D224192(Anti-USP35 Antibody) at dilution 1/30.
