产品全名: UTY 兔多抗

基因符号: UTY1; KDM6AL

UNIPROT ID: O14607 (Gene Accession - BC071744)

背景: This gene encodes a protein containing tetratricopeptide repeats which are thought to be involved in protein-protein interactions. The encoded protein is also a minor histocompatibility antigen which may induce graft rejection of male stem cell grafts. A large number of alternatively spliced transcripts have been observed for this gene, but the full length nature of some of these variants has not been determined.
