背景: ZNF138 (zinc finger protein 138) is a 262 amino acid nuclear protein that is implicated in transcriptional regulation. A member of the Krüppel C2H2-type zinc-finger protein family, ZNF138 contains six C2H2-type zinc fingers. The gene encoding ZNF138 maps to human chromosome 7, which houses over 1,000 genes, comprises nearly 5% of the human genome and has been linked to Osteogenesis imperfecta, Pendred syndrome and Lissencephaly. May be involved in transcriptional regulation as a repressor.

Immunohistochemistry analysis of paraffin embedded Human cervical cancer tissue using 218229 (ZNF138 Antibody) at a dilution of 1/30 (Nucleus).

In comparison with the IHC on the left, the same paraffin-embedded Human cervical cancer tissue is first treated with the fusion protein and then with 218229 (Anti-ZNF138 Antibody) at dilution 1/30.
