

HUMAN IGFBP2 PROTEIN, HFC TAG

货号: 11696

产品全名: 人 IGFBP2 蛋白

规格: 10/50/100 µg

基因符号 IBP2;IGF-BP53

目标蛋白: IGFBP2

UNIPROT ID: P18065

描述: Recombinant human IGFBP2 protein with C-terminal human Fc tag

背景: The protein encoded by this gene is one of six similar proteins that bind insulin-like growth factors I and II (IGF-I and IGF-II). The encoded protein can be secreted into the bloodstream, where it binds IGF-I and IGF-II with high affinity, or it can remain intracellular, interacting with many different ligands. High expression levels of this protein promote the growth of several types of tumors and may be predictive of the chances of recovery of the patient. Several transcript variants, one encoding a secreted isoform and the others encoding nonsecreted isoforms, have been found for this gene. [provided by RefSeq, Sep 2015]

物种/宿主: HEK293

分子量: The protein has a predicted molecular mass of 57.3 kDa after removal of the signal peptide.

分子特征: IGFBP2(Ala36-Gln325) hFc(Glu99-Ala330)

纯化: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

储存和运输: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
