

RAS(A146T)

产品名称: RAS(A146T) 小鼠单抗

货号: 26261

基因符号: H-Ras; K-Ras; N-Ras

描述: RAS(A146T) 小鼠单抗

背景: The A146T mutation of KRas results in an amino acid substitution at position 146, from an alanine to a threonine. KRAS encodes a protein that is a member of the small GTPase superfamily. Ras A146T mutation results in decreased GTPase activity and constitutive signaling. It can be found in many tumors, such as lung adenocarcinoma, mucinous adenoma, ductal carcinoma of the pancreas and colorectal carcinoma.

免疫原: A synthetic peptide from the internal region of Ras which includes the mutation of A146T, human origin.

Immunofluorescence of cells expressing HRas proteins with anti-HRAS(A146T) antibody. HEK293T cells were transfected with pCDNA3-GFP-HRas (WT) plasmid (left column) or pCDNA3-GFP-HRAS(A146T) plasmid (right column), then fixed and stained with anti-HRAS(A146T) monoclonal antibody (货号:26261).
